

Speech Therapy

Speech therapy services are available for patients of all ages. Services are provided as inpatient, outpatient, and through home health care. Video fluoroscopic swallow studies are performed at the hospital.

Areas of treatment for pediatrics and adults include:

- Swallowing
- Communication
- Speech
- Cognition
- Voice

A referral is required.

1015 Union Street ● Boone, Iowa 50036
(515) 432-7729 ● www.boonehospital.com

Common diagnoses treated include:

- Speech and language delays
- Autism
- Stroke
- Traumatic Brain Injury
- Parkinson's disease
- Dementia
- Cancer
- ALS (Amyotrophic Lateral Sclerosis)

Evaluation and treatment of language, cognition, voice, articulation, fluency, and swallowing of children and adults with delays or disabilities are provided through speech therapy. Therapy helps each person work toward increased functioning and independence in their daily lives by providing therapeutic strategies that are specific to each person's needs.

Our speech-language pathologist works with each individual and their family or caregiver to establish goals and develop a program that is specific to the client's needs. Evidence based practice is utilized to overcome impairments. Speech therapy helps with development or rehabilitation of functional skills for communication, cognition, and swallowing.
